## CS 291 Exam 3 April 26, 2023

Name:

1. (20 points) Convert the following NFA to a DFA. Show your work. Show both the DFA table AND the graph of the resulting DFA.

2. (10 points) Given the grammar: $S \rightarrow a a a \mid a S b$
(a) Show a parse tree for the string $a a a a a b b$
(b) Is this the only parse tree for this string? If yes, say so. If no, show another parse tree.

Page 2
3. (15 points) Find a regular expression for each of the following languages over the alphabet $\{a, b, c\}$.
(a) $\left\{a^{m} b^{n} c d^{o} \mid m, n, o \in \mathbb{N}\right\}$
(b) Strings over $\{a, b\}$ containing the substring $a b b$.

Page 3
4. (15 points) Draw a graphical picture of a DFA to recognize the language:
(a) $a^{*} a b c^{*}+a c b$

Page 4
5. (15 points) Find a regular expression for the language accepted by the following DFA. Do so by first eliminating state 1 , then eliminating state 0 . Show your work:

Page 5
6. (15 points) Find a grammar for each of the following languages:
(a) $\{a a c b b, a a a c b b b, \ldots\}=\left\{a^{n} c b^{n} \mid n>1\right\}$
(b) $\left\{a b, a a a b, \ldots, a^{2 n+1} b, \ldots\right\}=\left\{a^{2 n+1} b \mid n \in \mathbb{N}\right\}$
7. (10 points) Show that the following grammar is ambiguous by finding a string in the language with two different parse trees. Show the two different parse trees.
(a) $S \rightarrow b \mid S a S$
